

Document Management with Power System

Auditable Archive and Signature Verification Efficiently and Reliably

i-effect *INFOSTORE is an interface of the DMS System InfoStore from Solitas AG. InfoStore is a fast, compact, and high performance electronic archive, storage, and document management system, which runs on the IBM System i.

InfoStore integrates storage and retrieval of many different document types and enables electronic archiving for the whole company. Its modern, straightforward philosophy offers excellent configuration and integration possibilities for the execution of many different customer requirements. All documents from different systems are always available through the uniform user interface.

i-effect *INFOSTORE is a stack-based solution for efficient import and archiving of documents in InfoStore; it allows the storage of PC documents over standardized interfaces. A command prompt in **i-effect** allows the user to send data directly to the archive and extracts index points at the same time. Because of its integration into the whole of the **i-effect** environment, all of the archive functions can be used in all modules. The archive

files can be permanently stored in a read-only auditable format using **i-effect** *INFOSTORE. As with all **i-effect** functions the archive functions are recorded in the central Logbook in chronological order, which enables monitoring of importation processes.

A key feature of **i-effect** *INFOSTORE is the ability to use other functions in conjunction with archiving. PDF or EDIFACT documents, which will be archived, can be signed with a qualified electronic signature with the help of the *SIGG module.

Signature Testing

i-effect's *OCSP module creates a test report for signed documents, which are to be added to the archive, which is in line with the requirements of the law.

ARCHIVE DMS / OCSP

Archive and Document Management Module

Archiving: *INFOSTORE

Archivierung

- Spool file Archiving SCS, IPDS, AFPDS, PCL, PDF
- Archive document versioning
- Microsoft Office Integration
- PC documents archiving
- Flexible Retrieval-Function for the Web, Lotus Notes and Microsoft Office
- Document Routing for support of the complete Document-Life-Cycle

- Complete Archive integration in i-effect
- Transfer of send and receipt files to the archive
- Transfer of conversion input and output into the archive
- Integration with *SERVER for automation

Batch Importer

- Command prompts
- Interface for importation of PC files
- Supports Multi-Key-Index values and archives TIFF images as an image file

Archive access with WebDMS

Access InfoStore WebDMS archive data with a standard web browser

- Archive inquiries with simple and detailed searches
- Display of the documents found
- Document archiving with InfoStore
- Document attribute editing
- Document storage and Retrieval

Signature Testing with *OCSP

Signature Verification

- Real-time status testing
- Online testing of X.509 certificates
- Automatic testing of signed documents at reception
- Archived status logs
- Output of the test reports in different languages
- Communication protocol HTTP or HTTPS
- Defined in RFC 2560

The **i-effect** module *OCSP can also be combined with other modules.

Automation:

* SERVER

- Event controlled, time controlled
- Monitoring of the IFS directory, DB2 libraries and output queues
- Workflow configuration using pre-defined event controlled processes
- Conditional post processing of jobs

Foundation Module:

* BASE

- Base module of all i-effect implementations
- Manages modules and maintains core data
- Live monitor of session activities
- Diagnostic and Status messages
- Detailed partner specific data exchange log

Cross Module:

Cross Module

- Native i5/OS
- Call up functions of existing applications using command prompts
- DBCS, all CCSID
- Multi-lingual
